In the half-century since introducing the ER electron-tube automatic balancing recorder (Japan's first) in 1951, YOKOGAWA has shipped more than one million industrial recorders to users around the world. The DX Series DAQSTATION incorporate the highly reliable technology that YOKOGAWA has developed through its many years of expertise as a recorder manufacture.

Dust-proof and waterproof panel (IP65, NEMA No.250 TYPE4* compliant)

YOKOGAWA designed the DX Series to be under harsh environmental conditions. The front panel has a dust-proof, waterproof design which is compliant with the IEC529-IP65 and NEMA No.250 TYPE4* standard. This structure provides good protection for the recorder's internal components as well as the removable storage media drive mechanism. Compliance with IP65 means that front panel has met stringent requirements such as complete protection (of internal components) against dust, and protection against functional error even when the recorder is sprayed with a jet stream. The DX Series' ability to endure such environmental conditions has been proven through stringent evaluation tests.

* Except external icing test.
