### Other display modes

Bar graph display
Vertical or Horizontal bar graphs can be selected in the bar graph display mode.

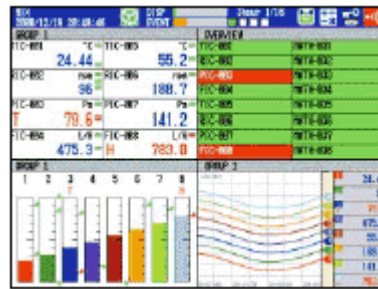

Large-font numeric display
Large-font display mode shows measured data as numeric values, displays channel number, tag name, engineering units, and alarm status.

Historical trend display
This display mode allows you to display historical data stored in memory. From the overview display, select the area you want to view and jump to a historical trend of the data.

Split screen display
This mode lets you split the screen into four areas, and select the display format for each of the areas.

News

Yokogawa has won 1st place in the recorders category of the CONTROL's 15th Annual Readers' Choice Awards for 15 consecutive years!

⇢ more

Overview screen
This screen lets you monitor the alarm statuses and numeric value for all channels.

Information screen
This information screen displays alarm summary, message summery, memory information or media information.

## DAQSTATION provides the recorder display features you need.

Quickly find old records

- **With conventional recorders, the process of removing the paper to locate specific data is very inefficient.**
  In contrast, the DX series lets you quickly find and display the data you need including alarm and message summaries. You can also select and enlarge a desired part of a trend overview screen using the cursor.

- **Optimizing the display format for the measurement type**

- **Users often want to use different display formats for different types of data. Sometimes a trend display is best, while in other cases it is necessary to monitor levels.**
  The DX Series provides a wide range of display formats, including trend display, bar graph display, and large numeric value display. These features let you monitor data using the best display format for the application. The DX200 also has a split-screen feature that lets you display four different areas in different display modes.
